- How to download the software
- Scanbody conversion in just 3 clicks!
- Configure the M.U.A. component
- Measure the gingival height of your prosthetic case
- Check the axes and parallelism between implants

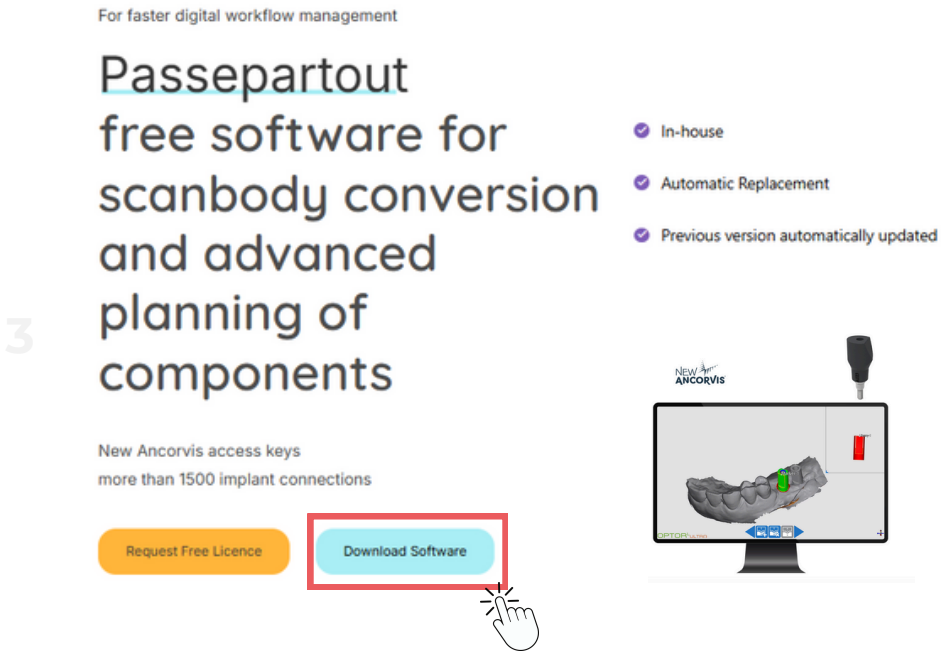
IC_ 011 Rev.02 23/06/2025

Procedure

Passepartout

1 Access the platform **Naloading** and click on the box **"Prosthetic Planning Software"**

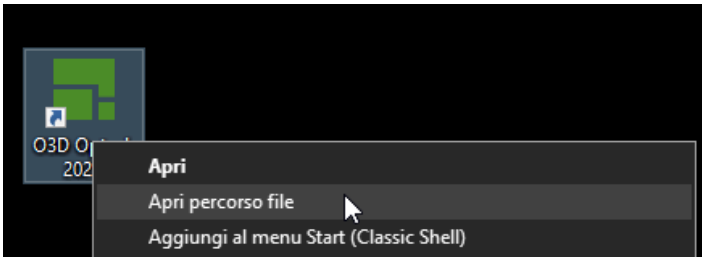
2 To install the software, click on **"Download Software"**



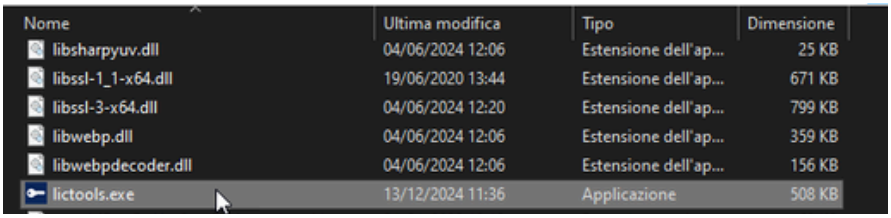
3 How to activate the software

Once the download is complete and the program installation has been initiated, an icon will be automatically created on the desktop (or in the designated destination folder)

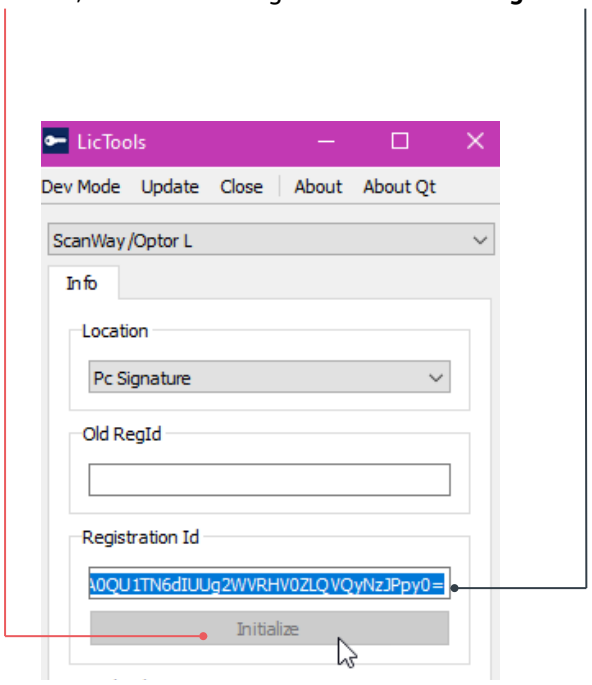
Right-click the program icon and select “Open file location”



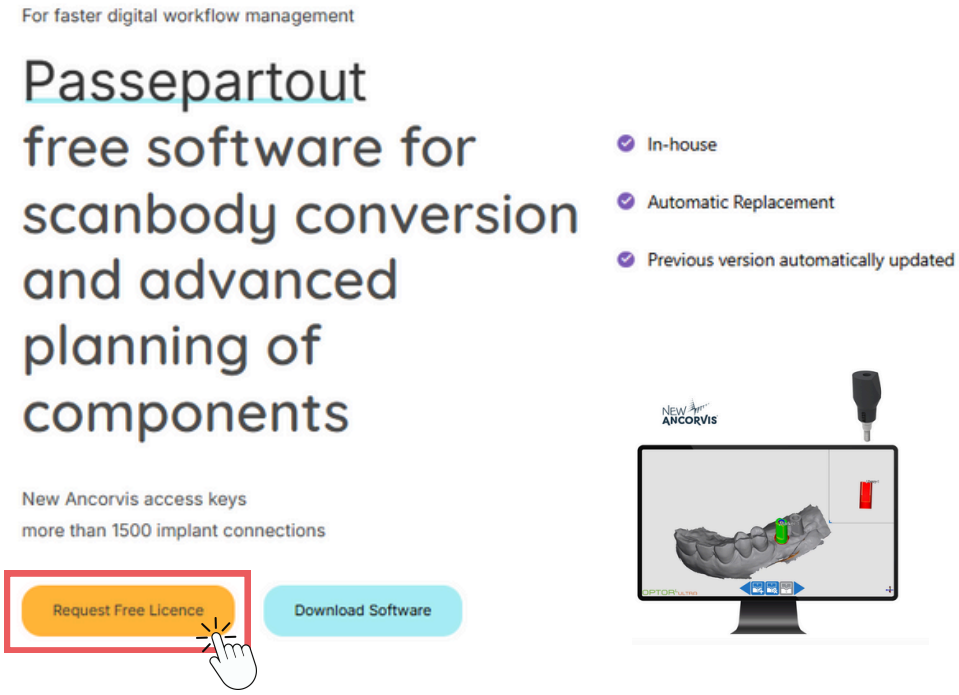
Click on “LIC Tools”



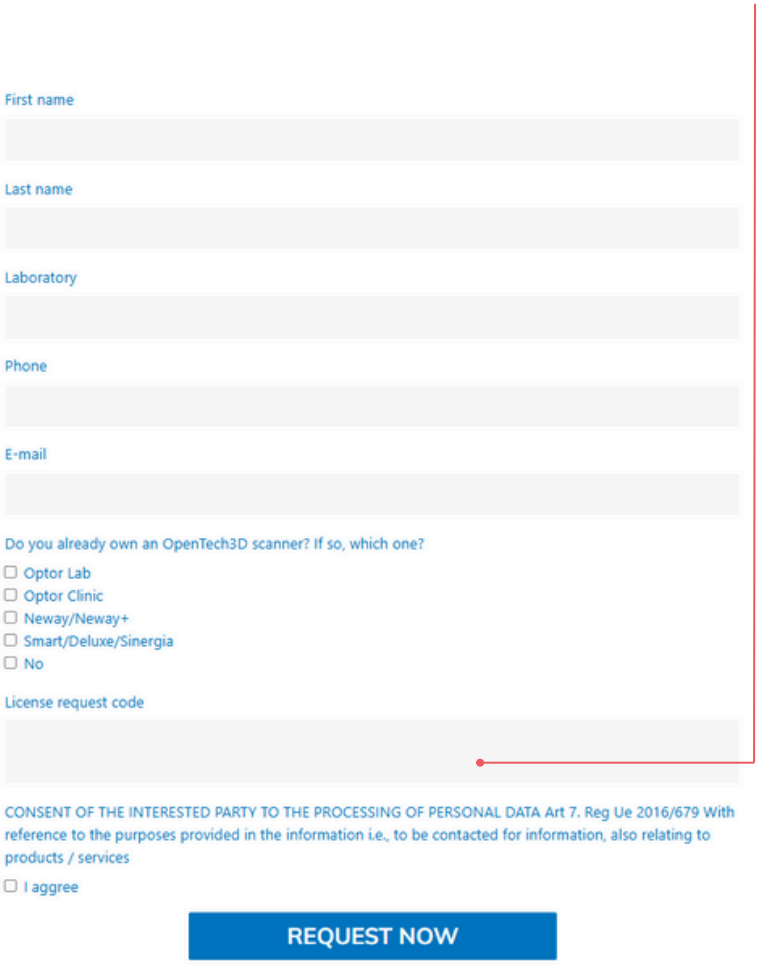
By clicking “**Initialize**,” a code will be generated in the “**Registration ID**” field.



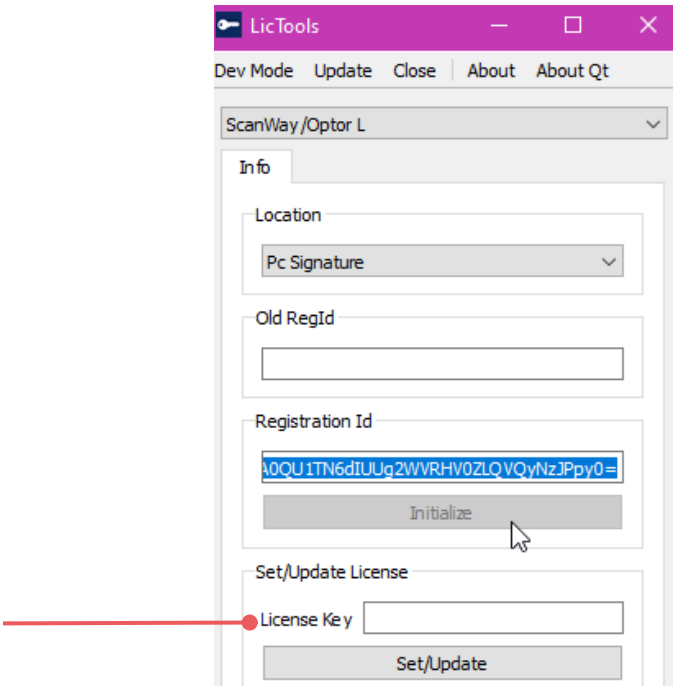
4 **How to request the software license:** return to the “NA Loading” page and click on “**Request Free License**” to access the application form



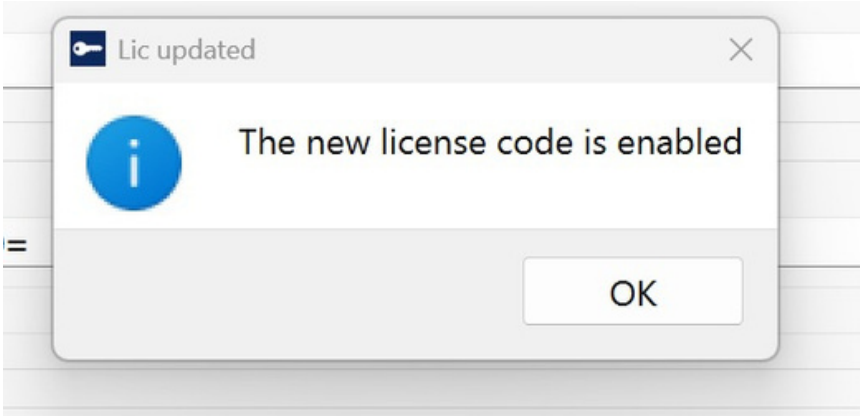
Fill out the form and paste the copied code into the “**License Request Code**” field.



Within 48 hours, you will receive an email containing the license code, which must be entered in the "**License Key**" field by accessing "LIC Tools" through the program icon generated on the desktop (as previously described)



The software is now active



5 Use the software following the steps indicated

Start project

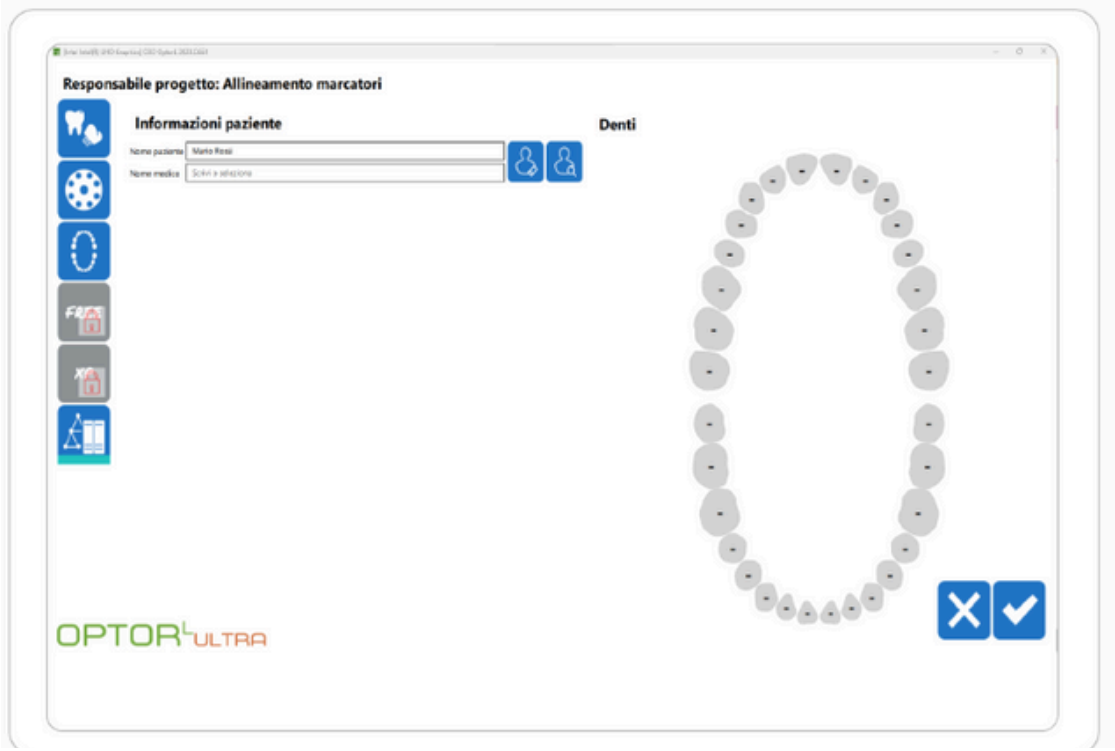
Open the software and select the scanbody alignment icon, marked in green.

Enter patient name

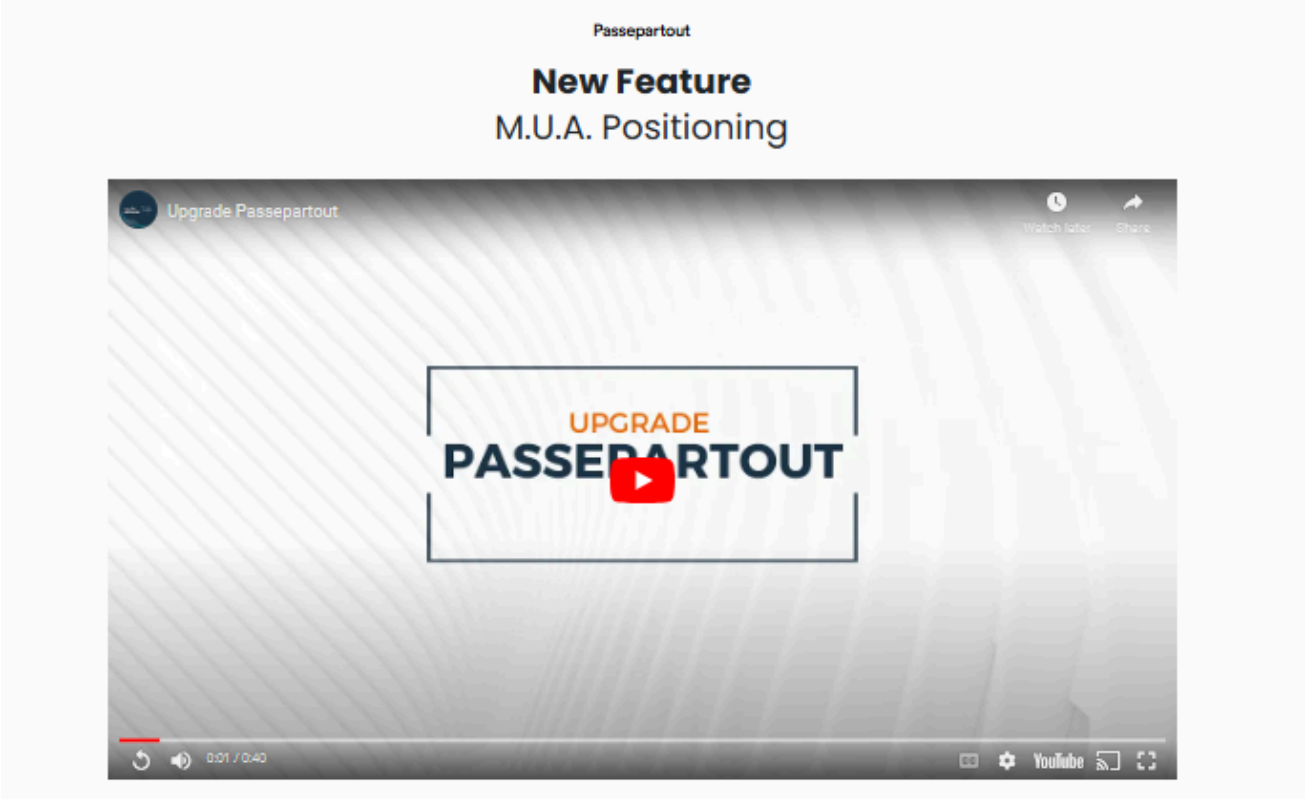
Fill in the dedicated forms, Patient Name and Doctor Name, for easier work organisation.

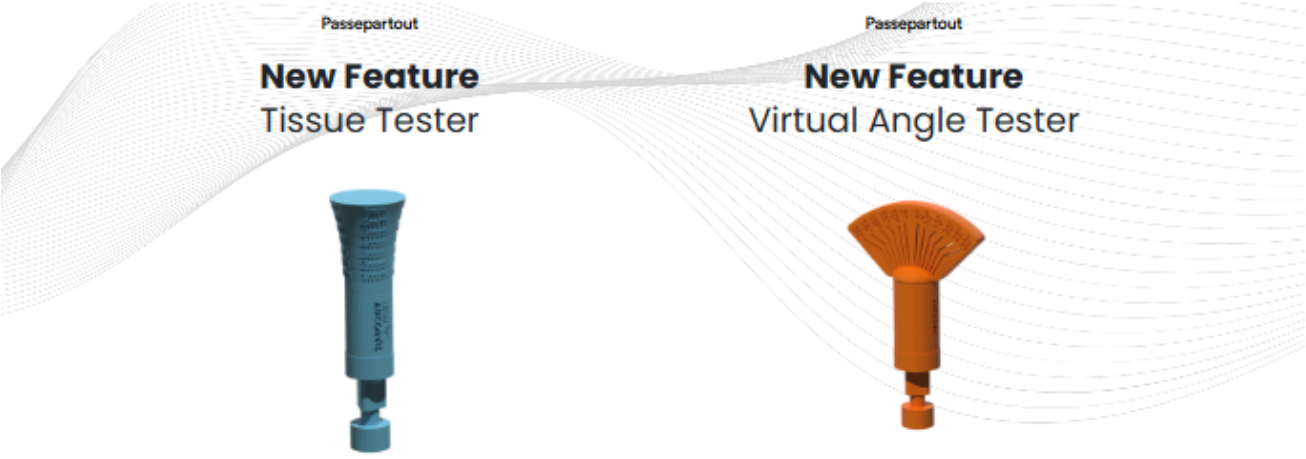
Start your conversion

Click on the blue tick to start the conversion.



6 Discover the new features of the software

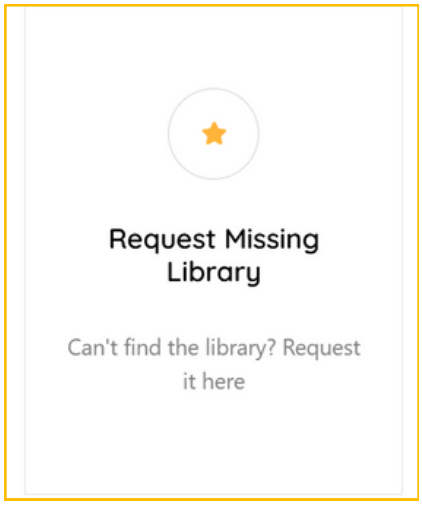




7 Request Missing Library

- If the scanbody library you need isn't available, please consult the dedicated section to request immediate implementation

- Fill out the form by entering the requested information.
  Implementation time: 1-2 business days



Can't find the component?
Click here to request a custom one.

Save 1 working day compared to standard conversion
